## Set user details

You can add multiple users at once with the same access type and permissions. Learn more

**User name*** 

Add another user

## Select AWS access type

Select how these users will access AWS. Access keys and autogenerated passwords are provided in the last step. Learn more

**Access type*** 

- **Programmatic access**
  Enables an **access key ID** and **secret access key** for the AWS API, CLI, SDK, and other development tools.
- **AWS Management Console access**
  Enables a **password** that allows users to sign-in to the AWS Management Console.

## Review

Review your choices. After you create the user, you can view and download the autogenerated password and access key.

**This user has no permissions**

You haven't given this user any permissions. This means that the user has no access to any AWS service or resource. Consider returning to the previous step and adding some type of permissions.

## User details

| | |
|---|---|
| **User name** | User1 |
| **AWS access type** | Programmatic access - with an access key |
| **Permissions boundary** | Permissions boundary is not set |

## Tags

The new user will receive the following tag

| Key | Value |
|---|---|
| Name | First User |

## Sign-in credentials

| | |
|---|---|
| Summary | • Console sign-in link: https://759620407517.signin.aws.amazon.com/console |
| Console password | Enabled (never signed in) \| Manage |
| Assigned MFA device | Not assigned \| Manage |
| Signing certificates | None |

## Access keys

Use access keys to make secure REST or HTTP Query protocol requests to AWS service APIs. For your protection, you should never share your secret keys with anyone. As a best practice, we recommend frequent key rotation. Learn more

Create access key

| Access key ID | Created | Last used | Status | |
|---|---|---|---|---|
| AKIA3BXHHSDO535JQBQB | 2021-01-24 10:08 UTC+0530 | N/A | Active | Make inactive ✖ |

# IAM dashboard

We encountered the following errors while processing your request:

- User: arn:aws:iam::759620407517:user/User1 is not authorized to perform: iam:GetAccountSummary on resource: *
- User: arn:aws:iam::759620407517:user/User1 is not authorized to perform: iam:ListAccountAliases on resource: *

## IAM resources

We encountered the following errors while processing your request:

- User: arn:aws:iam::759620407517:user/User1 is not authorized to perform: iam:GetAccountSummary on resource: *
- User: arn:aws:iam::759620407517:user/User1 is not authorized to perform: iam:ListAccountAliases on resource: *

## Best practices

- Grant least privilege access: Establishing a principle of least privilege ensures that identities are only permitted to perform the most minimal set of functions necessary to fulfill a specific task, while balancing usability and efficiency.
- Use AWS Organizations : Centrally manage and govern your environment as you scale your AWS resources. Easily create new AWS accounts, group accounts to organize your workflows, and apply policies to accounts or groups for governance.
- Enable Identity federation: Manage users and access across multiple services from your preferred identity source. Using AWS Single Sign-On centrally manage access to multiple AWS accounts and provide users with single sign-on access to all their assigned accounts from one place.
- Enable MFA: For extra security, we recommend that you require multi-factor authentication (MFA) for all users.
- Rotate credentials regularly: Change your own passwords and access keys regularly, and make sure that all users in your account do as well.
- Enable IAM Access Analyzer: Enable IAM Access Analyzer to analyze public, cross-account, and cross-organization access.
